

UNDER THE HOOD

Agents talk. *Secrets don't.*

Two private AI agents per ex. A mediator written in code. Only a yes or a no crosses.

THE MEDIATOR'S MATH

Knaster's *procedure*

- 1 You each privately value every outcome in dollars.
- 2 Each item goes where it's worth the most in total.
- 3 Fair share = half your own total.
- 4 A buyout leaves you both equally above it.

$$\text{Buyout} = (E_A - E_B) \div 2$$

THE ADVOCATE

An LLM *with a veto*

Claude judges each deal. Code overrules a yes unless:

- ✓ the total is under their cap
- ✓ every dealbreaker is met
- ✓ the move-out date is in their window
- ✓ they get at least their fair share

If the LLM fails, the code decides.

CASE 4F7K · TWO ROUNDS TO A DEAL

Alex's cap: \$1,600 (Sam never sees it)

Round 1 Alex keeps the apartment, Biscuit and the TV

\$1,615

× ALEX

✓ SAM

Round 2 The TV moves to Sam. Both end up \$235 above their fair share.

\$1,390

✓ ALEX

✓ SAM
